- Caldoo is een bedrijf met:
 - Een duidelijke visie
 - En een heldere propositie
 - De beschikking over Consultants met meer dan 10 jaar ervaring
 - Ervaring opgedaan bij gerespecteerde klanten in de top 250
 - Consultants zijn stuk voor stuk “Best in class”
- Caldoo is tool /product onafhankelijk
- Ons motto ‘Betrouwbare Performance in ICT’
- Caldo(o) is Italiaans voor warm en betrokken

Deze warmte en betrokkenheid willen wij uitstralen

Nikola Tesla describing a cell phone back in 1926...

"When wireless is perfectly applied the whole earth will be converted into a huge brain, which in fact it is, all things being particles of a real and rhythmic whole. We shall be able to communicate with one another instantly, irrespective of distance. Not only this, but through television and telephony we shall see and hear one another as perfectly as though we were face to face, despite intervening distances of thousands of miles, and the instruments through which we shall be able to do all of this, will fit in our vest pockets."

Mobile Connect availability hits 2B

By Steve Costello

The GSMA's Mobile Connect mobile-based authentication solution is now available to some 2 billion customers, the industry association said today.

Since its introduction at Mobile World Congress in 2014, 34 network operators in 21 countries have launched, "with plans for additional launches and trials to follow in 2016 and beyond".

Mats Granryd, director general of GSMA, said: "As Mobile Connect is rolled out globally, mobile operators are fulfilling an important role in the digital identity space, giving users control over their own data and enabling consumers, businesses and governments alike to interact and access online services in a convenient,

private and trusted environment".

Mobile Connect enables customers to create and manage a digital universal identity via a single log-in. It securely authenticates users, enabling them to digitally confirm their identity and their credentials and grant safe one-line access to mobile and digital services such as e-commerce, banking, health and digital entertainment, and e-government, via mobile phones.

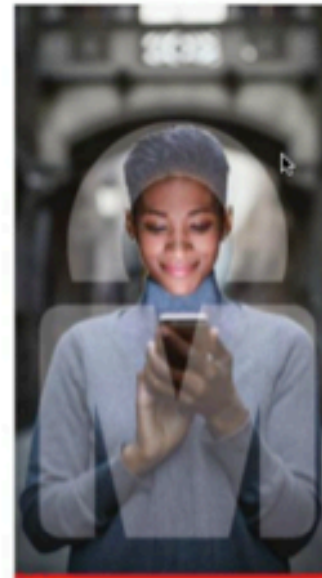

It uses the mobile phone number, along with a PIN for more secure use cases, to verify and grant access to services identified by the Mobile Connect logo.

Further rollouts are planned by operators worldwide this year, and the services supported are also being broadened.

Mobile Connect has been trialed in two EU Member States, Finland and Spain, to establish proof-of-concept for cross-border authentication of eGovernment services and online interactions between businesses, citizens and public authorities.

And Mobile Connect is also evolving to deliver secure authorisation of digital transactions and to add context and trust attributes about users and transactions.

"Over the past two years, the industry has come together to simplify consumers' lives by offering a single, trusted, mobile phone-based authentication solution that respects online privacy and helps to mitigate the vulnerability of online passwords," Granryd said.

"Mobile operators are fulfilling an important role in the digital identity space"

Global operators, Google and GSMA strike RCS partnership

By Kavir Majithia

A host of global operators, GSMA and Google today announced the launch of a new industry initiative designed to accelerate the availability of Rich Communications Services (RCS).

The move will enable an open, consistent and globally interoperable messaging service across Android devices.

Operators have agreed to transition towards a common universal profile, based on GSMA's RCS specifications and an Android RCS client, provided by Google in collaboration with operators and OEMs.

Gemak versus security

De opkomst van

- 7,7% van de medewerkers gebruiken een eigen wearable zoals smart watch voor hun werk
- Maar op dit moment hebben ongeveer 47% van de medewerkers een wearable in hun bezit
- Verwachting is dat BYOD de route is waarop wearables hun intrede zullen doen in de op het werk
- Het wachten is op de killer app!

- Enterprise Mobility Management is nu veel meer dan MDM
 - Multi device, cross platform applicatie ontwikkeling
 - Een veilige identity en access management strategie over en voor alle devices
 - Veilige Data en Content management verkeer
- 2015 jaar van shakeout en consolidatie
 - Kleinere spelers zijn gestopt, overgenomen of focus verlegd
 - Grote spelers zijn nu de grote IT Vendoren of een aantal nieuwkomers
 - Doen en kunnen meer dan EMM
